In Support of the Coalition for Patients' Rights

The Coalition of Patients' Rights (CPR) was founded to preserve every patient's right to access the caregivers of his or her choice.

CPR member organizations represent healthcare professionals who have well-established legal authority under state jurisdiction to provide direct care to patients seeking options to conventional medical care. Physician trade groups should respect the rights all legally authorized health professions and should cease trying to limit or reduce other professions' ability to provide quality care without physician oversight, especially in an era when the U.S. physician workforce is unable to meet patients' needs and this oversight adds unnecessary cost to the healthcare system.

For these reasons, ABC Coding Solutions supports the mission and goals of the CPR.
